Connectivity without compromise

Leased Lines

Experience the power of bigger bandwidth

Fibre Leased Lines are the traditional method of delivering business grade connectivity in the UK. Functionally equivalent to M24Seven's Wireless Leased Line products, fibre is delivered using subterranean fibre optic cables from various carriers.

They are symmetrical (identical upload and download speeds) and have a guaranteed SLA for fault resolution. While many Fibre Leased Lines are uncontended, some may be contended to lower their price point. Quality of Service (QoS) can be enabled on all leased lines to deliver latency sensitive applications such as VoIP.

Our Fibre Leased Line solution provides dedicated, symmetrical and reliable bandwidth with guaranteed SLAs that ensure high-speed, always-on, uncontended connectivity to keep your business operational and competitive. The subterranean optical cables from wholesale carriers that we use can be integrated with our wireless solutions - ensuring that you are connected everywhere, all the time.

Product benefits and features:

- Symmetrical, uncontended bandwidth up to 10Gbps

- UK-wide and global connectivity

- Dedicated, unlimited circuit exclusively for your business

- Fixed IP addressing

- Primary and secondary DNS provision

- Diversity of network providers and technology ensures the right solutions

- Guaranteed network availability with 99.95% uptime

- Fully integrated with our Wireless Leased Line to deliver a network with unrivalled diversity and no single point of failure

- 24/7/365 proactive monitoring

- QoS support that guarantees bandwidth for critical applications and services

- Fully managed and configured Cisco router included with redundancy options

- Managed firewalls and security features
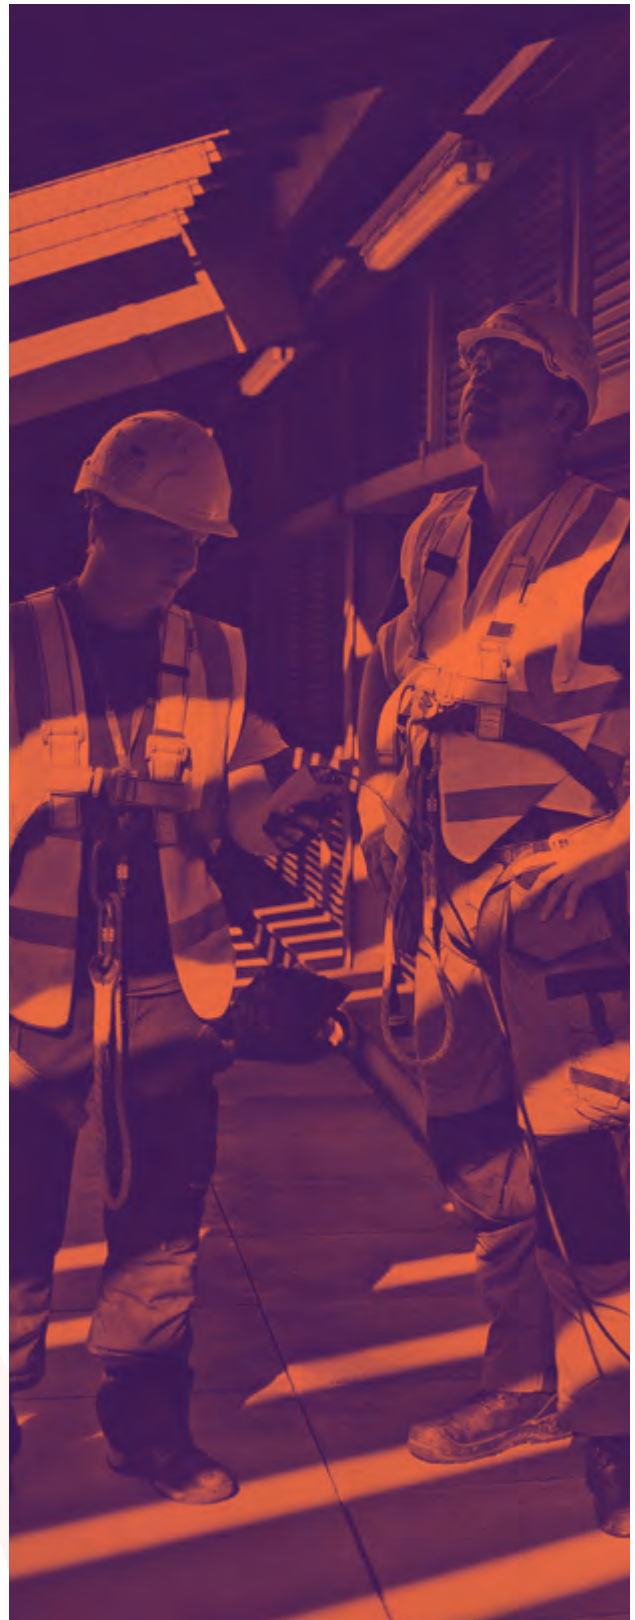

Business benefits:

Guaranteed Speeds:
Leased Lines offer symmetrical bandwidth (the same upload speed as download speed), dedicated guaranteed speeds and the reassurance of an SLA for fault repairs.

User Experience:
If you have already or are considering implementing VoIP, SIP or video conferencing between sites or to the internet, Fibre Leased Lines can have QoS profiles implemented that allow certain types of traffic to be prioritised over day-to-day applications in order to ensure a best user experience.

Diversity:
Even if you are outside of our wireless coverage, it is still possible to implement a, 'no single point of failure' fibre solution - either through different providers or via specialist products with guaranteed levels of separation.
