Content Filtering

Superior protection and control over content

We believe content filtering is not just about blocking adult content, but it is about empowering people to gain control over the content they, and those they care for, view.

Available as a fully managed or co-managed service, our content filtering packages are available at a fixed rate, enabling you to protect employees, pupils, or vulnerable people, keeping everyone safer in the digital world.

```
object to mirror_ob

sod.wirror_object = wirror_ob

sod.use_x = True
sod.use_y = False
ution == "MIRROR_Y":
sod.use_y = False
ution == "MIRROR_Y":
sod.use_y = True
tion at the end -add back the dese
sol.use_y = True
tion at the end -add back the dese
sol.use_to = True
tion at the end -add back the dese
sol.use_to = True
tion at the end -add back the dese
```

Product benefits and features

- A centralised internet content filtering system that requires no equipment to install, no complicated configuration, and it is fully backed up by a 24/7/365 telephone and email support line
- Enabling safe search engines to introduce a level of protection for internet searching, also block proxy sites/servers (these can be used to by-pass filtering as you use another IP to access sites) and any hacking sites
- We have access to a huge database of website addresses that covers 5 billion URLs.
 The filtering system we utilise is being used worldwide by over 250 million users
- We can provide 'time-of-day' or duration based controls on internet use

Business benefits:

Enabling you to fully control security of your network:

All requests for changes to specific content filtering rules, must be made by the bill payer and we will often phone to make sure they are genuine, where appropriate. All requests are monitored and audited by our team to make sure access is not granted to inappropriate or restricted content by people not authorised to do so.

Enhancing safer environments:

We have 65 different, already configured, categories that can be used to block or allow internet access, along with time profile and custom rules (depending on which package is chosen) As standard we block race/hate, violence, adult content, gambling and alcohol and the IWF list (Internet Watch Foundation).

Protecting your staff:

Comprehensive reports on browsing habits of employees or other users to fulfill HR requirements and allowing you to control access to certain websites, including social media.
